

A FOCUSED, PAID STARTING ENGAGEMENT

Technology Decision Assessment

Commission a focused answer to one consequential technology decision before committing to implementation.

ONE DECISION. A DEFINED NEXT STEP.

Know what to do, what must be proved, and who owns the next decision.

01 Evidence and dependencies

A current-state map, critical dependencies, and a findings register that separates observed facts, assumptions, and unresolved questions.

02 Options and recommendation

Practical alternatives, their operating consequences, and a recommendation tied to the decision you need to make.

03 First delivery phase

A bounded next phase with deliverables, owners, prerequisites, sequence, and explicit exclusions.

04 Acceptance and next decision

Observable acceptance criteria, evidence still needed, and the decision required from your sponsor.

The standard scope

One named decision and one connected business process or delivery workstream. Up to three connected systems, five stakeholder conversations, a findings readout, and one consolidated clarification round.

WORKING PLAN AND ENGAGEMENT TERMS

Start with a clear mandate.

Confirm the question, scope, inputs, and commercial basis before work starts.

Timing

The standard working plan spans ten business days after kickoff and receipt of the agreed inputs. The proposal confirms actual dates and adjusts the plan for access, stakeholder availability, and complexity.

Inputs and participation

- A sponsor who owns the decision and a technical contact who can coordinate access.
- The business objective, deadline or constraint, and existing architecture, plans, or examples relevant to the question.
- Availability for the agreed interviews and readout. Any sensitive material uses an agreed channel.

Commercial basis

This is a paid, fixed-scope engagement. TMG provides a written fixed-fee proposal after confirming the decision, systems, evidence, and participants. The proposal states the currency, fee, payment terms, timetable, and exclusions before work starts.

Completion and acceptance

Completion means the agreed findings, options, first-phase plan, and acceptance criteria have been delivered and reviewed. Open evidence gaps are recorded with their effect on the recommendation. Assessment completion does not mean a system has been repaired or an implementation outcome is guaranteed.

Scope boundaries

Implementation, production changes, formal security certification, legal or regulatory opinions, platform licensing, and ongoing support require separate scope. Additional systems or decisions are agreed as a scope change.
